

# The Unit Circle

To begin . . .

fold a flattened paper plate into quarters

To be a **one unit circle** means the radius is 1 unit in every direction. Label the coordinates as shown and include the degrees.

Convert to radians:

$$90^\circ$$

$$180^\circ$$

$$270^\circ$$

$$360^\circ$$

Then place the radian measurements  
next to their corresponding degrees.

Fold the paper plate into eighths to create  $45^\circ$  wedges.

Convert to radians:

$$45^\circ$$

$$135^\circ$$

$$225^\circ$$

$$315^\circ$$

Then place the radian measurements  
next to their corresponding degrees.

Next we need folds for  $30^\circ$  and  $60^\circ$ . These are a little more challenging.

Next, convert each angle to find its corresponding radian value.

$30^\circ$

$210^\circ$

$60^\circ$

$240^\circ$

$120^\circ$

$300^\circ$

$150^\circ$

$330^\circ$

Then place the radian measurements next to their corresponding degrees.

Next, let's find the actual points on the circumference of the unit circle as  $(x, y)$  points for each angle.

It's really quite simple there are only five lengths to know....

$$0 \quad \frac{1}{2} \quad \frac{\sqrt{2}}{2} \quad \frac{\sqrt{3}}{2} \quad 1$$

Remember the special triangles from Geometry ???

The short guys . . .

The medium guys . . .

The tall guys . . .

The final steps . . .

First, let's place the guys by their size,  
then we can figure out the signs. . .

Now. . . The best part....

The ***x-coordinates*** are the exact values of the ***cosine*** for each angle on the unit circle.

The **reciprocal of each *x-coordinate*** is the exact value of the ***secant*** for each angle on the unit circle.

The ***y-coordinates*** are the exact values of the ***sine*** for each angle on the unit circle.

The **reciprocal of each *y-coordinate*** is the exact value of the ***cosecant*** for each angle on the unit circle.

The ratio of ***y/x*** is the exact value of the ***tangent*** for each angle on the unit circle.

The ratio of ***x/y*** is the exact value of the ***cotangent*** for each angle on the unit circle.
